Standard Operating Procedure (SOP)
Eagle Manpower Lookahead – Workforce Scheduling & PM Demand Planning

Rev 3.2 – roles (incl. view-only Member and Scheduler), display names, protected admin account, multiple planning roles, Service vs. Projects, manpower requests, activity log, PCC integration

---

1. Purpose

To establish a consistent, accurate, and repeatable process for using the Eagle Manpower Lookahead application to plan, assign, and track staff across active and upcoming projects – ensuring accurate utilization, timely PM demand planning, controlled access by role and branch, a clear path for borrowing people between branches, a complete record of who changed what, and safe handling of schedule data shared with the Project Command Center.

---

2. Scope

This SOP applies to all activities performed within the Eagle Manpower Lookahead application, including:

- Daily and weekly staff scheduling
- Project, overhead, roster, and user administration (roles, branches, project managers)
- PM demand planning and coverage tracking
- Manpower requests between branches
- Reviewing schedule data synced from the Project Command Center
- Alerts, reporting, the activity log, and data backup

---

3. Roles & Responsibilities

Every account carries a set of roles (any combination), set by an administrator under Administration > Users, and optionally a branch. Together these decide what a user sees and what they may change. An account with no role at all is a view-only Member.

Role	What they do	What the system allows
Member (no role)	Views the board, PM demand, requests and activity – the right setting for technicians checking their own schedule.	Read-only everywhere. Cannot assign, note, plan demand or send requests; the board header shows View only.
Scheduler	Day-to-day scheduling on the Manpower Board; dispatch notes; PM demand for shared projects and projects in their branch.	Edits people and projects in their own branch. With no branch set (“All branches”) they may edit every branch.
Project Manager (PM)	Enters and maintains PM demand plans for the projects assigned to them; confirms or edits PCC demand drafts.	PM Demand shows only their assigned projects. Scheduling rights are the same as a Scheduler.
Branch Coordinator	Everything a Scheduler does, plus answers manpower requests from other branches for people in their branch.	Must have a branch set. Approve / Decline on the Requests page for that branch.

Role	What they do	What the system allows
Administrator	Owns the roster, projects, overhead, staffing roles, users, roles and branches, project-to-PM assignment, backups and restores.	Administration page; unrestricted editing; may answer any request.

Shared duties for every role

- Keep assignments current for the weeks you are responsible for
- Review Alerts and the Project Command Center conflict badges for your area
- Use manpower requests – not workarounds – when you need someone from another branch
- Export a JSON backup on the agreed cadence (see 4.13)

---

4. Procedure

4.1 Login & Dashboard Review

Objective: Confirm system access and review current staffing health before making changes.

Actions:

- Sign in with your Eagle Manpower Lookahead credentials (sign-ins and sign-outs are recorded in the activity log)
- Review the Dashboard:
  - Company utilization, at-capacity, and under-assigned counts
  - Total PM demand and unstaffed demand hours
  - Needs Attention list and 4-week capacity pressure
- Check the Requests item in the sidebar – a number next to it means something is waiting on you
- Note any items requiring immediate action

Deliverable: Confirmed awareness of current staffing status

4.2 User Administration (Administrators)

Objective: Give each account the right role and branch so people see and change only what they should.

Actions:

- Under Administration > Users:
  - Everyone who has signed in appears automatically; to set someone up before their first sign-in, enter their email in Add by email
  - Enter a display Name in the field beside the email – it replaces the email on requests, the activity log and the sidebar
  - Toggle roles with the Scheduler / PM / Coordinator / Admin pills – they combine; Member (none on) is view-only, which is what technicians should have
  - Set the Branch from the dropdown; All branches means unrestricted editing
  - A Coordinator must have a branch, or requests for that branch will only reach administrators
- Remove an account from the list if it should no longer carry a role or branch (the login itself is managed in Firebase Authentication)
- The account marked Protected is the permanent safety net:

- o Its roles, branch and name cannot be changed or removed from the app, by anyone – so an administrator can never lock everyone out
- o Keep its password somewhere safe; use it only to repair access if the other administrators are lost

• Keep at least one Coordinator per branch and more than one Administrator; you may change your own roles, except removing Admin from yourself while you are the only administrator

Deliverable: Every user listed with the correct role and branch

4.3 Roster, Project & Overhead Setup (Administrators)

Objective: Keep the underlying roster and job data current before scheduling.

Actions:

- Under Administration > Roster:
  - o Add, update, or remove personnel and their office / job title / skills
  - o A person's office is the branch that controls their schedule
  - o Switch on every planning role a person can fill (the pills on their row) – the first one on is their primary; PM demand coverage counts them toward whichever of their roles a plan still needs
  - o Maintain the Staffing Roles used for PM demand planning
- Under Administration > Projects:
  - o Add new jobs, set the office (blank = shared across all offices), and tag required skills
  - o Mark service work (service calls, training, standing service items) as Service with the Project / Service toggle – it then sits in its own section here and on PM Demand
  - o Choose the Project Manager from the dropdown – a user with the PM role only sees the projects assigned to them on PM Demand
- Under Administration > Overhead:
  - o Maintain non-project categories (PTO, Office, Remote, Sales, Holiday)

Deliverable: Up-to-date roster, project, overhead, and project-manager records

4.4 Staff Assignment (Manpower Board)

Objective: Assign people to jobs or overhead for the correct days and weeks.

Actions:

- Select the People, Projects, or Heatmap view, and set the office/job filters and horizon (1–12 weeks)
- Each person shows two utilization pills: project / job work, and office / overhead time
- Click an empty or existing day cell to open the assignment editor
- Use the Apply To day pills to assign one day or several days at once within that week
- Choose the job or overhead to assign, or clear the day
- Use the Job Tray (Show/Hide Job Tray) to drag jobs or overhead directly onto a day
- Drag an existing assignment onto another day to reassign it, or onto the Drop here to clear bar that appears along the bottom of the screen to remove it (Ctrl+Z undoes the last clear)
- Double-click a day (or a merged multi-day block) to add a dispatch note:
  - o Each joined day gets its own note box – a 3-day block can carry three different notes
  - o Every day with a note shows its own preview line on the chip (tagged by day when they differ)
- If your account is assigned to a branch:

- The page header shows Editing <branch> only; people in other branches are marked read-only and their cells are dimmed
- You cannot assign, note, or drag onto those people – clicking one of their days opens a manpower request instead (see 4.7)

Deliverable: Accurate day-by-day staffing on the Manpower Board, with dispatch notes attached where needed

4.5 Weekly Navigation

Objective: Review or adjust staffing for a specific past or future week without changing the horizon view.

Actions:

- Switch the board to the 1-week view
- Use ‹ Prev / Today / Next › to step to the week needed
- Make or review assignments as described in 4.4

Deliverable: Correct staffing for the targeted week

4.6 PM Demand Planning

Objective: Capture each project's PM-requested staffing needs by week and role.

Actions:

- Open PM Demand from the sidebar, or click a project name / week cell from the board
- Projects are listed first; jobs marked as Service sit in their own section underneath
- Users with the PM role see only their assigned projects (the subtitle reads Showing your projects); everyone else sees all projects for the selected office
- For the active week, assign a PM / demand owner and set status (Draft or Confirmed)
- Add one role requirement row per need, with headcount and hours per person
- Record notes or assumptions, then Save PM Demand
- Review the coverage meter and role-gap indicators; clear a week if no longer needed
- Limits to be aware of:
  - A project that belongs to another branch opens read-only (banner at the top) unless it is shared or you are its Project Manager
  - Project skill requirements are changed by administrators only

Deliverable: Current, role-based PM demand plan for each project and week

4.7 Manpower Requests (Borrowing People Between Branches)

Objective: Ask another branch for one of their people, and let that branch's coordinator decide and apply the change in one step.

Actions:

- To ask (any user with a branch):
  - On the Manpower Board, click a day of the person you need – their cells are marked read-only
  - Pick the days, the job you need them on (only jobs you could schedule yourself are offered), and write a short message
  - The form names the coordinator who will receive it; Send request
  - The requested days show a Requested badge on the board for everyone until the request is answered

- To answer (Branch Coordinator of that branch, or an Administrator):
  - Open Requests from the sidebar – the Needs my action tab lists what is waiting on you; a toast also appears when a new request arrives while the app is open
  - Review the message, what those days currently hold, and reply if you need more information
  - Approve & move: confirms, moves those days to the requested job on the board, and records the outcome in the request thread
  - Decline: optionally give a reason; nothing on the board changes
- The requester can Withdraw an open request and sees the outcome under My requests
- If the form warns that a branch has no coordinator, ask an administrator to assign one (see 4.2)

Deliverable: Cross-branch staffing changes made through an approved request, with the decision recorded

4.8 Project Command Center (PCC) Schedule Sync

Objective: Review and act on schedule data the Project Command Center writes into the board automatically.

Actions:

- Recognize PCC-sourced items on the board:
  - A dashed chip with a “Tracker” badge – PCC placed that person there from the project schedule
  - An amber chip with a “Tracker wants here” badge – PCC wanted them there, but the day was already booked by hand; PCC leaves the hand-booked entry alone
- Recognize PCC-sourced PM demand:
  - A PM demand week shows a “PCC draft” badge and banner until a PM edits or confirms it
  - Once edited or confirmed, the banner changes to PCC · edited / confirmed and PCC stops updating that week
- Review any conflict badges and confirm the hand-booked entry is still correct
- Confirm or adjust PCC-sourced demand drafts the same way as any other PM demand entry (see 4.6)

Deliverable: PCC-sourced schedule and demand data reviewed and, where needed, confirmed or corrected

4.9 Alerts & Conflict Resolution

Objective: Identify and resolve staffing risks before they affect delivery.

Actions:

- Review the Alerts page for over/under-utilized people and projects needing a plan or more hours
- Open the related employee or PM demand record directly from an alert
- Reassign staff or adjust the PM demand plan to close the gap – or raise a manpower request if the people you need are in another branch

Deliverable: Reduced open alerts and documented resolutions

4.10 Ops Intelligence & Scenario Planning

Objective: Assess longer-range capacity pressure and model staffing changes before committing them.

Actions:

- Review the 12-week forecast, Action Center, Project Health, and Role Pressure panels
- Use the Scenario Lab to model surges, absences, or shifted demand without affecting live data

Deliverable: Informed, forward-looking staffing decisions

4.11 Reporting, Exports & Crew Communication

Objective: Share accurate staffing and demand information with stakeholders.

Actions:

- From Reports, export the weekly CSV, print/export to PDF, or copy a crew message by office
- Review the Weekly Demand and Utilization by Office tables as needed

Deliverable: Distributed reports and crew communications

4.12 Activity Log

Objective: Know who changed what, and when. Every change made through the application is recorded automatically.

Actions:

- What is recorded (with the user and time):
  - Schedule changes, written out per person and day, e.g. “A. Smith · Tue Oct 20 – Wed Oct 21: free -> C11396 Project Faraday”
  - Dispatch notes added, changed, or removed; PM demand saved or cleared
  - Roster, project, overhead, staffing-role, and holiday edits; user role and branch changes
  - Manpower requests sent, approved, declined, or withdrawn; sign-ins and sign-outs
- Open Activity from the sidebar; filter by area, time range, user, or search text; Export CSV for a record outside the app
- Entries cannot be edited or deleted by anyone, and are kept for one year
- A board change is only accepted by the system when it carries its activity entry, so nothing on the board changes without a record of who did it
- Use the log to answer “who moved this person?” before changing it back, and to review access changes after staffing turnover

Deliverable: A complete, searchable history of changes, available to every user

4.13 Data Backup & Recovery

Objective: Protect scheduling data against loss or error. A full-board deletion has happened before and was only recoverable because a recent JSON backup existed – treat this step as mandatory, not optional.

Actions:

- From Reports, export a JSON backup on a regular cadence (daily during active use; weekly at minimum)
- Store the backup file in an approved, shared location – not only on one person’s machine
- If the board ever shows “No board data found”:
  - Do not click Create new empty board – that is for first-time setup only
  - Contact an administrator immediately and restore from the most recent JSON backup
  - Check the Activity log to establish what happened and when
- If a routine restore is needed, use Restore Backup and confirm the replacement before proceeding (administrators only)

Deliverable: A current backup file retained at all times, and a documented path to recover from data loss

---

5. Data Integrity & Review Checklist

- Does every active project have a current-week PM demand plan and an assigned Project Manager?

- Are any people over 100% or under 50% utilized without explanation?
- Are office and role assignments accurate for all active personnel?
- Does every user have the correct role and branch, and does every branch have a Coordinator?
- Are there open manpower requests older than two business days?
- Have open Alerts been reviewed and addressed or documented?
- Have PCC conflict badges ("Tracker wants here") been reviewed this week?
- Are PCC demand drafts for active projects confirmed or intentionally left as drafts?
- Is the most recent JSON backup less than one week old?

---

6. Continuous Improvement

- Review Dashboard and Ops Intelligence trends regularly to refine staffing norms
- Review the Activity log periodically for unexpected changes or access that should be tightened
- Update Staffing Roles and overhead categories as operations evolve
- Incorporate feedback from Project Managers and Branch Coordinators into demand and request practices
- Report any PCC sync errors (visible in the Project Command Center's own sync status) to an administrator

---

7. Quick Reference

I want to…	Where	Who
Assign or clear a day	Manpower Board -> click a day cell	Any editing role, within their branch
Add a dispatch note	Manpower Board -> double-click a day or block	Any editing role, within their branch
Borrow someone from another branch	Manpower Board -> click their day -> Send request	Any editing role with a branch
Check my own schedule (read-only)	Manpower Board / Dashboard	Member (no role), e.g. technicians
Answer a request	Requests -> Needs my action	Branch Coordinator / Administrator
Plan PM demand	PM Demand, or click a project on the board	PMs (own projects), Schedulers, Coordinators, Admins
Assign a project to a PM	Administration -> Projects -> Project manager	Administrator
Mark a job as service work	Administration -> Projects -> Project / Service toggle	Administrator
Give a person extra planning roles	Administration -> Roster -> role pills	Administrator
Set a role, branch or display name	Administration -> Users	Administrator
See who changed something	Activity -> filter or search	Any user

I want to…	Where	Who
Export or restore a backup	Reports	Any user (export) / Administrator (restore)
